**RE: Proposed House Bill No. 6637 - AN ACT REQUIRING AN INVASIVE SPECIES
STAMP FOR THE OPERATION OF A MOTORBOAT ON THE INLAND WATERS OF
THE STATE**

Dear Senator Cohen and Representative Demicco:

I wish to thank the Environment Committee and the sponsors of Proposed House Bill No. 6637. I greatly appreciate the interest demonstrated by you in support of not only the CT Lakes community, but also the significant financial and recreational benefits generated by the lakes for Connecticut.

My name is Randy Miller and my wife and I own property in East Haddam at Lake Hayward. I am a member of the Connecticut lakes community, Vice President and a Director of the Connecticut Federation of Lakes and Co-Facilitator of the East Haddam Lakes Association.

I write in STRONG support of HB No. 6637 and the substitute language the Connecticut Federation of Lakes will provide. The modest user-fee based approach is both affordable and appropriate.

There are numerous reasons why we need to do all we can to remediate Aquatic Invasive Species, some of which are:

- Aquatic invasive species are increasingly impacting water quality, recreational use, environmental health and waterfront and lake zone property values associated with Connecticut water bodies. Income of thousands of local merchants statewide, and revenue of local municipalities, are negatively impacted (proven by many studies, including one by UConn) if water quality deteriorates.
- The recent appearance of Hydrilla in the CT River and Coventry Lake poses a severe threat that is in addition to growing problems from water chestnut, fanwort, milfoil, zebra mussels, toxic algae, etc.
- State agencies, municipalities, and lake authorities lack the resources to address this growing threat. Funding and staffing for invasive species prevention and control have been lost coincident with increasing damage and risk.
- Boats are the most common vector of transferring aquatic invasive species from lake to lake. This is supported by research.

- Millions are already being spent each year in CT to control milfoil, fanwort, water chestnut, toxic algae, phragmites, and other aquatic invasive plants.

We need to get ahead of this problem with effective prevention, education, and control and we need to act now!!!

The support HB 6637 is critical ... we ask YOU and each member of the Legislature to support this bill.

In addition statewide considerations, this issue is critical to us at Lake Hayward in East Haddam. Since 2005 we have taken actions to mitigate Aquatic Invasive Weeds in Lake Hayward, specifically remediating fanwort and milfoil. It is an ongoing struggle ... the invasives can never be eliminated, but can be controlled through ongoing diligent efforts managed by area residents. Since 2002, Lake Hayward area residents have privately generated and used over \$300,000 to treat aquatic invasives and have also received financial support from the Town of East Haddam, who understand the importance of the lakes to the local economy and recreational opportunities. We are just one of the many lakes who will be helped by the enactment of HB 6637.

Thank you.

Sincerely,

Randall Miller
